Let's Start!

Does your company need reliable information system?

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Design the data structure, starting from the conceptual model determined in the systems analysis, using database IT tools, according to regulation and established standards.

Can Do Statements:

- I can explain what an information system is.
- I can talk about the different elements that compose an information system.
- I can ask questions related to information systems.

Ask your partner:

- What level of expertise are you in software applications you handle
- What purpose do those applications serve?

Let's Explore!

A systems information sales rep* talks about a presentation he did last week.

*A "sales rep" is the short form to say "sales representative."

Instructions: Read the text below.

- Friend:** You're really the best at what you do, Mark. You're number one every month in your job and this one you're taking the lead too. That's impressive. How do you do it?
- Sales rep:** I guess it is the experience. Two days ago, for example, I was making a presentation to sell the company's new information system and everything went really well.
- Friend:** Excuse my ignorance, Mark, but what's an information system, a computer software?
- Sales rep:** Not exactly, it's much more than that. In simple terms, it is a compilation of integrated components that are used to collect, store, retrieve and distribute data, knowledge and information within a company, from and to its external stakeholders, and to those who need it for the purpose of planning, making decisions, coordinating processes and controlling activities and results.
- Friend:** Wow! It's a long definition. Do you usually study it?
- Sales rep:** Not at all. As I said before, it's the product of experience.
- Friend:** I see. Tell me more, Mark. You weren't giving all this information to your clients when you made the presentation, were you?
- Sales rep:** Of course. In fact, at this time that day, they were asking me lots of questions about it. After the definition, I told them about the components of an IS.
- Friend:** And what are they?
- Sales rep:** Well, it basically includes the hardware, software, communications infrastructure, trained personnel and users' experience. With all of them together, function and structure are guaranteed. Managers and workers can complete important tasks like analyzing problems, visualizing complex subjects, and creating new products thanks to modeling programs.
- Friend:** You mention users, why are they important for an IS?
- Sales rep:** Because all the enormous effort is conducive to satisfy users' everyday needs. That's what counts!

Let's Practice!

I was explaining to him what an information system is.

Instructions: Underline all the sentences in past continuous.

1. What were you doing last week to explain information systems?
 - a. I was trying to explain to my friend what an information system is.
 - b. I was explaining to him that an information system is a collection of technical and human resources.
 - c. I explain the use of computers.
 - d. He wasn't getting the information systems, but I was drawing a diagram to explain them easily.
 - e. He was copying a long definition about integrated components used to collect, store, retrieve and distribute data.

Let's Practice!

I work in the information systems area every day.

Instructions: Select the correct answer.

1. What did the engineer do yesterday?
 - a. He made a compilation of integrated components.
 - b. He will study the information systems.
 - c. He makes an analysis of the information systems.
2. What did you explain about Information Systems?
 - a. I explain the production cost of a new hardware.
 - b. I am explaining the elaboration of a software and its use to integrate codes, numbers and statistics.
 - c. I explained that it includes the hardware, software, communications infrastructure, trained personnel and users' experience.
3. What do you know about information systems?
 - a. They were very simple to use many years ago.
 - b. They are going to create a new concept for hardware and software.
 - c. It is a compilation of integrated components that are used to collect, store, retrieve and distribute data.
4. What can we do with information systems?
 - a. We did the homework about systems and computers.
 - b. We can complete important tasks like analyzing problems.
 - c. We were gathering information in the company.

Extension Activity

Now, I know more about information system.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search for information about information system.
- List its different elements and the purpose of each one.
- Make a brochure explaining what information system is and the purpose of its elements.
- Share your brochure with the class and discuss about it.

Self-Assessment

Yes

No

- I identify information about information system.
- I classify its different elements and the purpose of each one.
- I produce texts explaining information system and its elements.
- I discuss about information systems and their elements.

Target Words

- **communications infrastructure** (noun): wires, data cables, networks, routers, Wi-Fi access, terminals and other means used for communication purposes
e.g. Well, it basically includes the hardware, software, communications infrastructure, trained personnel and users' experience.
- **computer software** (noun): a program that controls different tasks in a computer, related to operational issues
e.g. Excuse my ignorance, Mark, but what's an information system, a computer software?
- **compilation** (noun): the act of putting some things together to serve a particular purpose
e.g. In simple terms, it is a compilation of integrated components that are used to collect, store, retrieve and distribute data, knowledge and information within a company, from and to its external stakeholders.
- **retrieve** (verb): to look for, find and read data or information stored in a computer in order to use it again
e.g. In simple terms, it is a compilation of integrated components that are used to collect, store, retrieve and distribute data, knowledge and information within a company, from and to its external stakeholders.
- **modeling program** (noun): software used to simulate a real situation in the computer to make calculations, make decisions, analyze problems and find solutions
e.g. Managers and workers can complete important tasks like analyzing problems, visualizing complex subjects, and creating new products thanks to modeling programs.
- **take the lead** (phrase): in a sporting or working competition, it means to start winning it
e.g. You're number one every month in your job and this one you're taking the lead too.

Learning Points

Past Continuous in Affirmative and Negative

The **Past Continuous Tense** has several uses, but generally speaking, it refers to actions that were happening for some time in the past.

The **Past Continuous Tense** can be used in affirmative, negative and interrogative forms. It refers to actions in a specific time in past, an action before another important action, or two actions at the same time.

TENSE	STRUCTURE	EXAMPLE
AFFIRMATIVE	Subject + was/were + verb-ing + complement	We were analyzing a recurring problem at 9 o'clock last night.
NEGATIVE	Subject + was/were + not + verb-ing + complement	I wasn't working during the break time.

Notice that when two actions occurred at the same time, you can express them by using **while** or **as**.

Example:

- I **was checking** my files **while/as** the engineers were updating the net.

Examples

- *I was making a presentation to sell the company's new information system and everything went really well.*
- *You weren't giving all this information to your clients when you made the presentation, were you?*

Learning Points

Simple Past and Simple Present with Time Expressions

Either tense, **Simple Past** or **Simple Present** is connected to **time expressions** that help clarify when the action takes place.

We use the **Simple Past** to express the idea that an action already finished at a specific time in the past.

Remember, use simple past to state the action was over and not in progress.

There are many **time expressions** associated to Simple Past. Let's take a look at some of them as they are said in English:

- Yesterday, yesterday morning/evening/afternoon, etc.
- The day before yesterday, the night before last night, etc.
- Last night, last week, last year, last month, last time, etc.
- This afternoon, this evening, that morning, that day, etc.
- An hour ago, a month ago, three years ago, minutes ago, a long time ago, etc.
- In 1999, in March, in March last year, in my 20s, in the 20s, etc.
- On Sunday, on 7th October 1956, on my birthday, etc.
- When I was at school, when I was younger, when she came home, etc.

Examples:

- I **had** an appointment with one of our clients **last week**, but we **could not** meet at the end.

Simple Present is used to state facts, generalizations, scheduled events and routines.

As with the Simple Past, there are many **time expressions** associated to Simple Present. Some of them are described as follows:

- Always, usually, often, regularly, generally, rarely, never, etc.
- Once a day, twice a week, three times a month, every day, etc.
- On Fridays, on Mondays, at the weekends, in the week, etc.
- In the afternoon, in the afternoons, in the evening, etc.
- In winter, in spring, in autumn, in summer
- Weekly, monthly, daily, annually, etc.
- Every summer, every holiday, every season, etc.
- At 6 o'clock, at night, at noon, etc.

Example:

- I check my e-mail **twice a day**, once **in the morning** and other **in the afternoon**.

Examples

- *You weren't giving all this information to your clients when you made the presentation, were you?*
- *You're number one every month in your job and this one you're taking the lead too.*
- *Do you usually study?*
